G.H.O.S.T.

READY TO DEPLOY

Platform Capability Brochure

ONE PLATFORM. ANY MISSION. ANYWHERE.

A commercial AI platform for mission-driven decision dominance.

OFFLINE | ON-PREM | SIPR / JWICS | DISCONNECTED

OVERVIEW

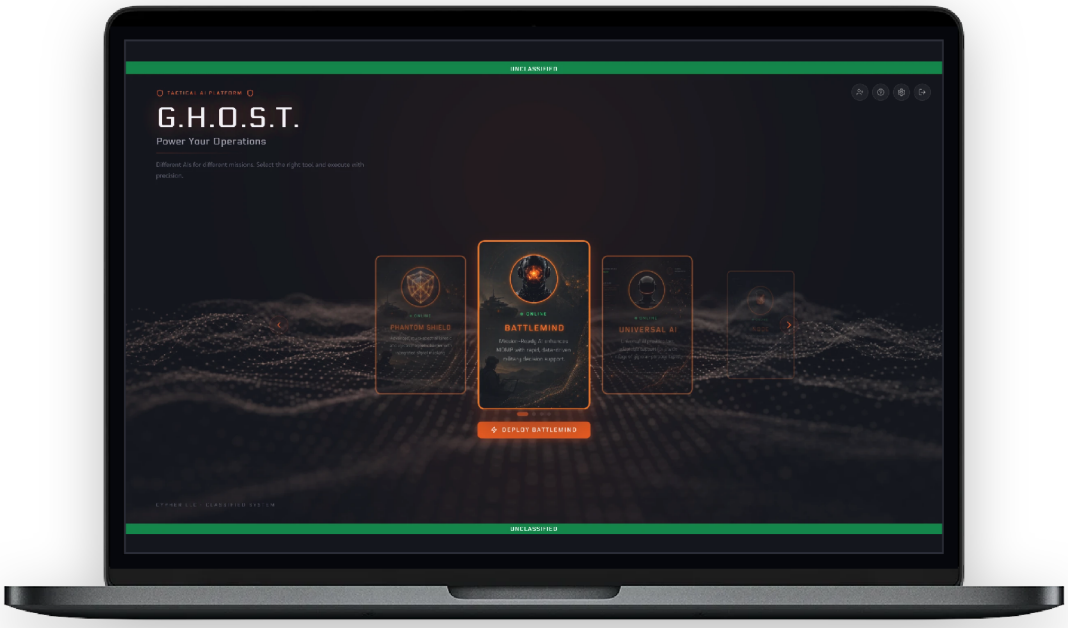

G.H.O.S.T. (Guided Heuristic On-Prem Support & Troubleshooting)

G.H.O.S.T.™ (Guided Heuristic On-Prem Support & Troubleshooting) is a commercial, modular agentic AI platform - hardened and operationally proven for the demands of national security and defense - delivering agentic, multi-step automated workflows across both cloud and on-device deployment models, giving operators the flexibility to leverage enterprise cloud infrastructure when available while retaining full mission capability with zero cloud dependency, zero data exfiltration risk, and no connectivity requirement.

G.H.O.S.T. hosts, orchestrates, and extends a growing library of mission-specific AI agents purpose-built for virtually any mission objective - including **BATTLEMIND**, a doctrine-trained agent for Army mission planning and warfighting functions that automates the Military Decision-Making Process and accelerates course of action development; **NODE** for network diagnostics and automation; **AMBASSADOR** for real-time translation and cultural advisory support; and **ARIA** for advanced intelligence research and analytical fusion - each capable of executing complex, multi-step tasks with minimal human intervention regardless of network environment.

OPERATIONALLY VALIDATED

The platform has been operationally validated in austere and denied environments across multiple theater-level exercises, including Pacific Pathways in the Philippines, JPMRC Yama Sakura in Japan, and STAFFEX, demonstrating its ability to automate staff workflows and accelerate decision cycles whether connected to enterprise systems or operating entirely at the tactical edge.

> G.H.O.S.T. is not a prototype or a proof of concept - it is a fielded, operational agentic AI system actively supporting live mission requirements within elements of the government, proven across both secure cloud environments and fully disconnected forward deployments.

PLATFORM ARCHITECTURE

Platform architecture.

USERS & ENTRY POINTS How your teams interact with the platform	**Business Analysts**	**Legal & Compliance**	**Military / Contracts**	**IT Operations**	**Finance Teams**
G.H.O.S.T. ORCHESTRATION ENGINE Automated workflows | Agentic routing | Context management	**Workflow Router** One-click agentic automated workflows. Domain-aware routing	**Agentic Reasoning** Multi-step planning. Chain-of-thought logic	**Ghost Guardrails** Safety & compliance layer. Output validation		
RAG ENGINE Retrieval-Augmented Generation	**Document Ingestion** PDF, DOCX, XLSX, PPTX, images	**Semantic Indexing** Vector embeddings & smart chunking	**Cited Retrieval** Inline source links. Audit-trail ready		
SPECIALIZED AI AGENTS Pre-built | Configurable | Domain-expert	**Military Missions** Online	**Network Operations** Online	**Policy & Regulatory** Online	**IT Infrastructure** Online	
SECURITY & GOVERNANCE Zero-trust | Audit-ready | Compliant	**RBAC & SSO** Role-based access. Identity federation	**Audit Logging** Full session trace. Immutable log chain	**Kill-Switch** Instant shutdown. Incident isolation		
CONFIGURABLE INFERENCE BACKEND Where the reasoning runs	**On-Device LLM** Fine-tuned local models. Zero external latency	**Private Cloud LLM** Your AWS / Azure tenant. No data boundary breach	**Air-Gap Fallback** Offline mode. Disconnected environments	**Workflow Templates** Pre-built & custom. One-click automation	
ENTERPRISE DATA SOURCES What the agents read	**Documents**	**Databases**	**REST APIs**	**SharePoint**	**ERP / CRM**

HOW IS G.H.O.S.T. DIFFERENT THAN OTHER GEN A.I. PLATFORMS?

Mission-grade Gen A.I., off the shelf.

KEY FEATURES

01 On-device fine-tuned Large Language Models (LLMs)

02 Modular AI Agents for domain-specific, "One Click" Automated Workflows - no more experimental prompting

03 Optional Zero-connectivity, no-call-home architecture

04 Containerization and encryption meeting DoD & IC requirements

05 Role-based access control and system-level logging

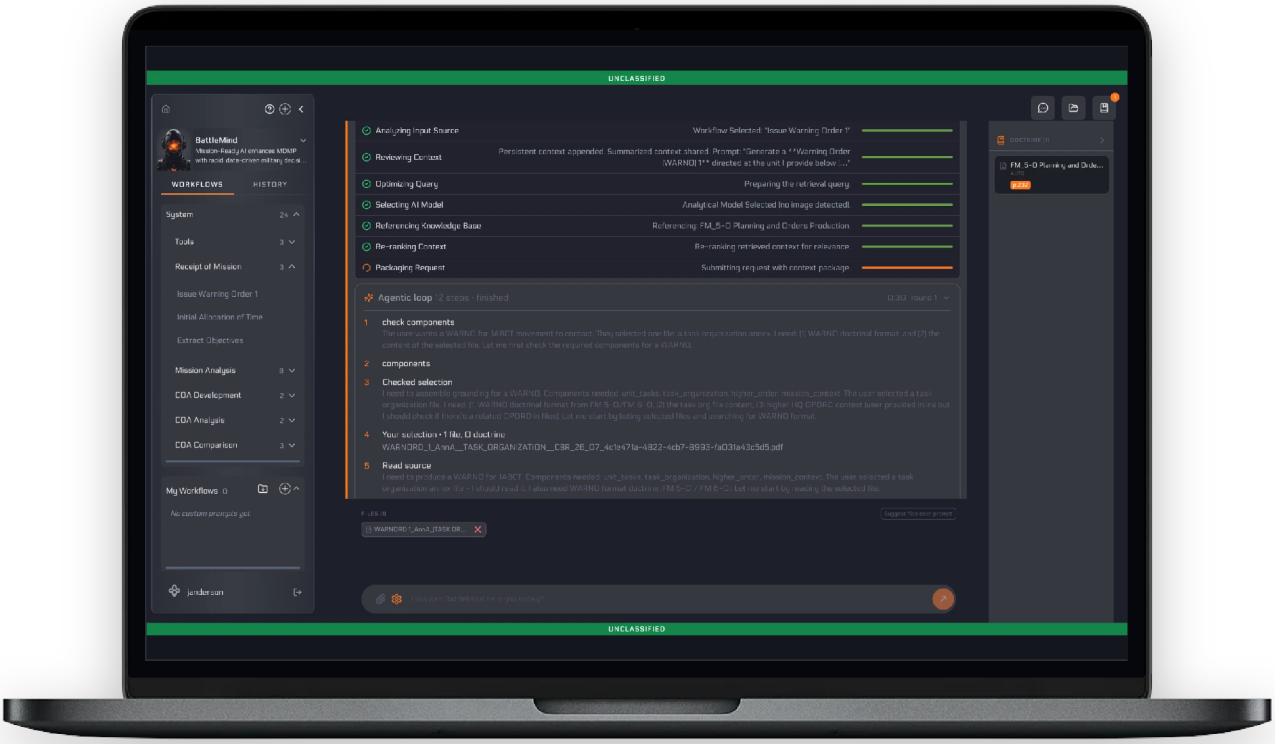

06 Multi-file UPLOAD processing and RAG-enabled citations

This enables a plug-and-play AI ecosystem deployable in forward-deployed field environments, SCIFs, Closed Enclaves, TOCs or Enterprise environments - without sacrificing capability or security.

WHY CHOOSE US?

Most enterprise GenAI platforms excel at generalized writing and analysis but remain fundamentally chat-centric tools. G.H.O.S.T.'s AI agents are built for operational time-to-resolution, driven by doctrine-aligned structures, unit-grounded references with full traceability, and mission-specific, one-click automated workflows that mirror how staffs actually plan, decide, and execute - rather than delivering a generic model wrapped in a user interface.

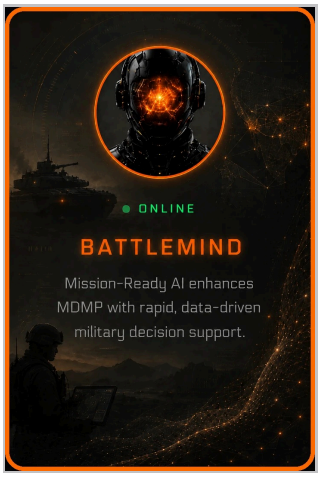

G.H.O.S.T. does not rely on the model as the differentiator. Value is created through the orchestration of workflows, retrieval-augmented generation, and context window that encode institutional knowledge, producing outputs with the fidelity, judgment, and structure typically achievable only by seasoned operators.

An agent working a tasking: the plan is shown first, every step is on screen, and the answer arrives cited.

FEATURED AI AGENTS

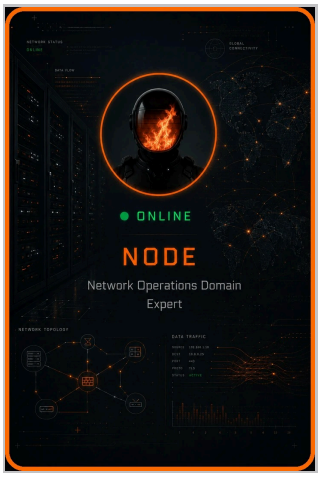

Three of the agents in the G.H.O.S.T. roster.

BATTLEMIND

Mission-Ready Military Decision Support

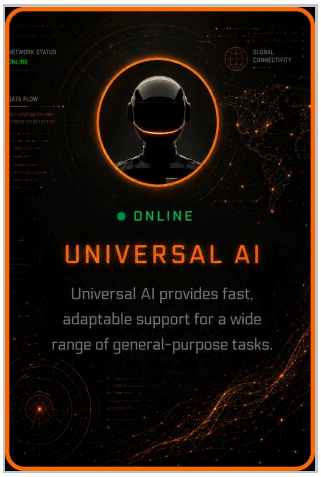

An MDMP-focused agent trained on Joint and Army doctrine, designed to accelerate Course of Action (COA) development, WFF product generation, image terrain analysis, mission analysis, and staff planning. Used in live Division HQ operations.

NODE

Network Operations & Infrastructure Analysis

A network diagnostic and automation agent capable of identifying misconfigurations, generating CLI commands, analyzing logs, and simplifying network troubleshooting - ideal for disconnected tactical networks, secured enclaves, and data centers.

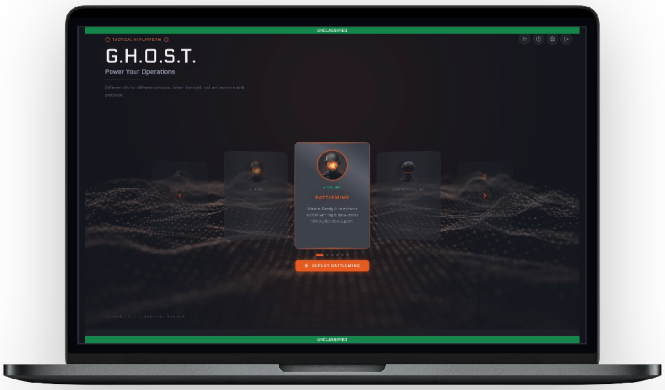

UNIVERSAL AI

General-Purpose Assistant & Concierge

A general-purpose cognitive assistant pre-trained for high-assurance environments. Accepts structured and unstructured inputs (PPTX, DOCX, PDFs, imagery), and supports everything from intelligence production to acquisition planning.

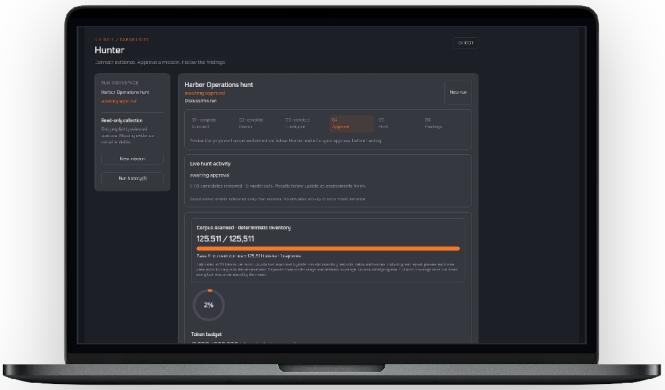

USING G.H.O.S.T. ON SCREEN

Choose the agent for the job. Approve the mission. Watch it work. Review the findings.

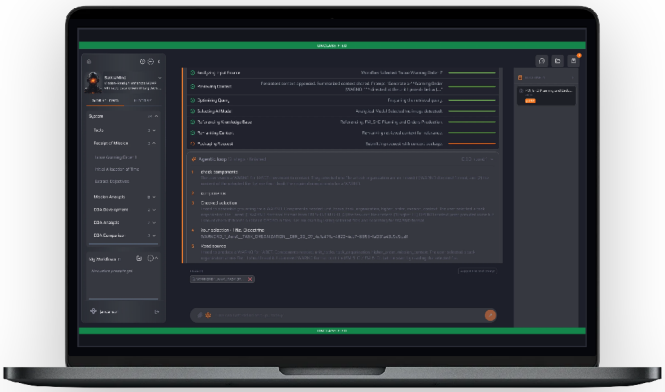

Step 1

Choose the agent for the job. Each agent is built for one mission area. Pick one from the roster, or let G.H.O.S.T. Mode choose the team for you.

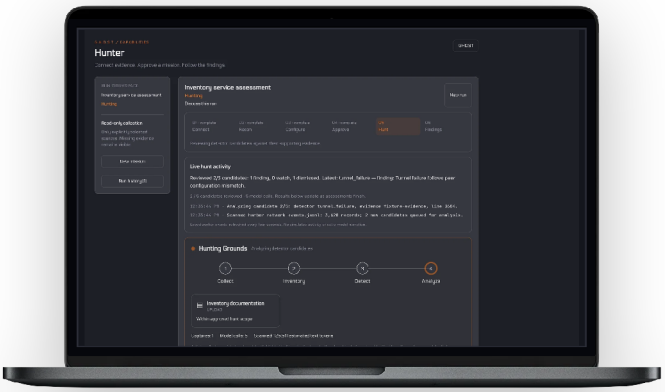

Step 2

Approve the mission. State the task in plain language and attach your files. The plan is shown first, and nothing runs until a person approves it.

Step 3

Watch it work. Every step shows on screen: what it searched, which documents it read, and which model it used.

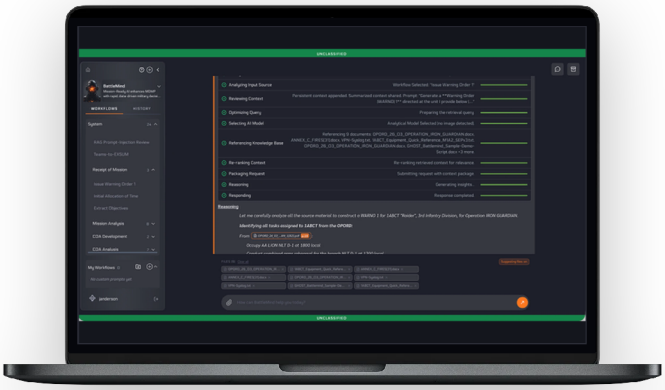

Step 4

Review the findings. Results arrive ranked, with evidence, assumptions and gaps, ready for a person to review and approve.

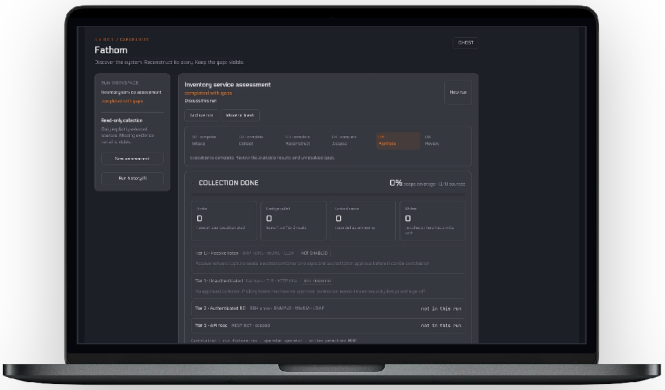

INSIDE THE PLATFORM

Real screens. Real evidence. A person stays in charge.

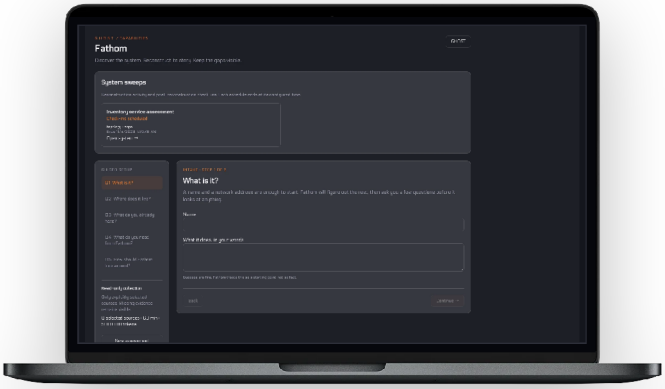

Agent workspace

Doctrine-grounded planning. A planning agent works an operations order: each step, source and model choice is on screen, and the answer cites the document it came from.

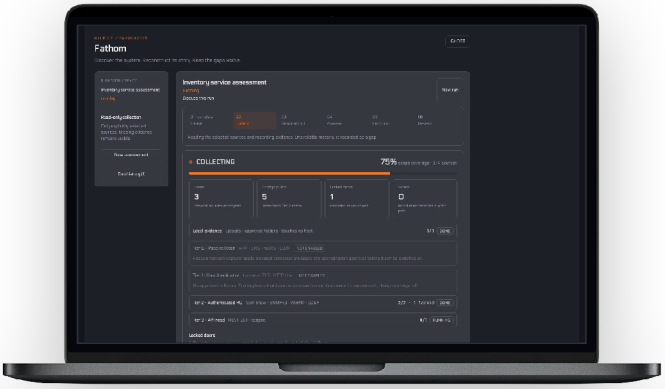

Assessment

Gaps are shown, not hidden. Fathom reconstructs a system from evidence and says plainly what the evidence does not prove.

Guided setup

A name and an address are enough. Fathom asks a few plain questions before it looks at anything, and scheduled sweeps keep the system watched afterward.

Collection

Read-only by design. Collection goes tier by tier. Locked doors are recorded as unknowns instead of being forced.

GOVERNMENT ALIGNMENT & COMPLIANCE

Aligned with the DoD AI Ethical Principles and CDAO Responsible AI guidance.

01 **Secure-by-design:** Operates entirely offline or on closed networks.

02 **Mission-focused:** Optimized for tactical and operational workflows.

03 **Auditable:** RAG-enabled outputs with inline citation tracing.

04 **Responsible AI:** No model training on operational data; no data leakage; auditable chain-of-thought reasoning.

COMPLIANT WITH OMB M-25-21

Supports modernization of federal digital infrastructure by:

01 Enabling secure, on-premise AI adoption.

02 Operating within Zero Trust architectures.

03 Providing modular, standards-based components for federal interoperability.

SUPPORTS EO 13960 AND EO 14179

01 Enhances AI transparency, accountability, and traceability.

02 Delivers safe, testable AI for sensitive mission workflows.

03 Empowers workforce augmentation and augmented intelligence, not full autonomy.

FEDRAMP PATHWAY SUPPORT

While G.H.O.S.T. is primarily offline, its architecture supports easy modular transition to FedRAMP-authorized cloud enclaves for hybrid deployment scenarios. G.H.O.S.T. is ATO ready for DoD and IC networks.

MISSION USE CASES

G.H.O.S.T. is not hypothetical - it's operational.

Our platform has been deployed and validated in high-stakes, real-world environments across multiple combatant commands and partner nations. Below are examples of successful field implementations.

1 U.S. ARMY - OPERATION FREEDOM SHIELD	Battlemind was deployed in support of live MDMP execution at the Division HQ in Schofield Barracks, HI. The AI agent enabled planners to accelerate mission analysis and generate WFF products that were briefed directly to the Commanding General.
2 U.S. ARMY - PACIFIC PATHWAYS (PHILIPPINES)	Battlemind supported combined planning operations in austere forward environments during bilateral exercises in the Indo-Pacific, validating G.H.O.S.T.'s disconnected deployment model.
3 3RD INFANTRY DIVISION - STAFFEX (ZAGAN, POLAND)	Battlemind was integrated into staff planning activities at the Division level in Europe, providing mission analysis products and COA development support during joint training in support of U.S. Army Europe and NATO partners.
4 JPMRC YAMA SAKURA, JAPAN	Used during coalition joint exercises, Battlemind demonstrated its ability to support multi-national staff planning by generating doctrinally aligned MDMP outputs without internet access or cloud dependency.

These use cases demonstrate G.H.O.S.T.'s effectiveness in enabling mission command and accelerating staff workflows under real-world operational constraints - no connectivity, high operational tempo, and doctrinal precision.

UNIQUE ADVANTAGES

What G.H.O.S.T. does that others do not.

DEPLOYMENT	Operates fully offline or on classified networks; no internet required
SECURITY	No data exfiltration risk; operates within DoD containerized environments
SPEED TO USE	Pre-trained, pre-configured agents available out of the box
DOCTRINAL RELEVANCE	Agents trained using FM, JP, and MIL STD references for accuracy and trust
PORTABILITY	Runs on hardened laptops or TAC servers for field and austere deployment
EXTENSIBILITY	Open agent framework enables custom workflows, third-party LLM integration

ACQUISITION VALUE & OPERATIONAL ROI

G.H.O.S.T. delivers rapid, low-friction value at the edge - no integration delays, no network dependencies, and no guesswork. Unlike legacy enterprise AI solutions that require cloud migration, lengthy ATO processes, and heavy resourcing, G.H.O.S.T. can be fielded within days and demonstrate value within hours.

SPEED TO MISSION

01 Fully operational in under 48 hours in most field or SCIF environments.

02 Pre-trained models and embedded doctrine eliminate lengthy configuration or model tuning.

03 Runs on standard, hardened laptops or TAC servers with no additional infrastructure required.

PLUG-AND-PLAY ADOPTION, ROI AND LICENSING

Fielded within days. Value within hours.

PLUG-AND-PLAY ADOPTION

01 No cloud dependency. No internet required.

02 Drag-and-drop interface with built-in file parsers (PDF, DOCX, PowerPoint, plaintext, xlsx).

03 Role-based access controls and system logs allow seamless integration with existing OPSEC protocols.

04 Works on SIPR, JWICS, online, or disconnected networks.

QUANTIFIABLE ROI

01 Reduces planning timelines by up to 80% for complex COA and WFF generation.

02 Reduces reliance on contractor support and analyst overhead by automating high-friction workflows.

03 Enables warfighter and staff productivity gains without replacing personnel - augments human decision-making.

04 One G.H.O.S.T. license often offsets the cost of hours for planning and analysis.

FLEXIBLE LICENSING & PROCUREMENT

01 Available under FAR Part 12 - Commercial Products and Commercial Services - as a firm-fixed-price (FFP) annual license.

02 Already listed with a network of resellers, with access to GWACs and IDIQs.

03 Multi-year license options available for SCIF or on-premise customers. G.H.O.S.T. is commercial-off-the-shelf software: licensed to the general public under standard commercial terms and delivered to every customer - commercial and government.

GET STARTED

Get started today and achieve mission dominance.

G.H.O.S.T. is available today for classified and unclassified use. It is actively deployed, validated, and ready for broader service adoption.
